Accordingly, the estimated fair value presented herein is not necessarily indicative of the amount that could be realized in a current market exchange. The use of different market assumptions and/or estimation methodologies may have a material effect on the estimated fair value. The following methods and assumptions were used by the Company in estimating fair values of financial instruments.

The approximate fair values of most financial assets and financial liabilities are based on the amounts recognized in the balance sheet as they are short-term and non-interest sensitive except for the approximate fair values of investments. For held-to-maturity debt securities, fair values are estimated by using discounted cash flows analyses based on current interest rates and remaining years to maturity.
